

# Actions

## *Assign an action to your figure*

---

To view the figure actions popover click the Actions button on the inspector bar.

### Figure Actions

The figure actions inspector can be used to specify what happens when a figure is double-clicked within the idea space.

#### Setting an Action

Choose the desired action from the popup menu at the top of the inspector. The choices of action include:

- None — nothing should happen when double-clicked. This is useful if you want to override a default action associated with a type of figure. For instance, normally an image is opened if double-clicked, but can be ignored if an action of ‘none’ is set.
- Go to Idea Space — choose an absolute item like first or last; a relative item like next or previous; backward or forward in history; or a specific idea space that you can choose.
- Open URL — then enter a URL that should be opened.
- Create Mail Message — then enter a default ‘to’ and ‘subject’ field. Note that the message will be created and displayed but not actually sent.
- Open File — choose a file that should be opened.
- Jump Target — simply copying a figure or idea space will store a jump location on the clipboard so you can click ‘Retrieve from Clipboard’ to retrieve it.
- Run AppleScript — then enter the script itself and click Compile to check it for errors or Execute to launch the script for testing purposes.

Click Set to set the action for the selected figure. You can restore its default double-click behavior by clicking Restore.

#### Adornment

By default Curio will show a little adornment next to a figure that has an assigned action
