

# Curio's World

*Curio is your project based über notebook*

---

## **The Real World...**

You have work projects and home projects, school classes to manage and book reports to research, vacations to plan and novels to write, web sites to design and lab results to organize. You currently use a collection of notebooks, your office whiteboard, scraps of sticky notes, oodles of browser bookmarks, and multiple documents scattered around your hard disk. You're juggling it all, but organizing this information should be easier.

## **A Better World!**

In Curio, create a project to represent your real-world project, then fill it with *everything* related to that project including notes, images, documents, web links, and much, much more. Use Curio's integrated collections, such as lists and mind maps, to organize all of this information or just place it anywhere on Curio's freeform pages, which we call *idea spaces*.

Anything placed into Curio can be associated with tags, flags, checkboxes, priorities, ratings, and start/due dates and durations, for fast and easy searching and task management.

The best part is you are in complete control over your idea spaces. Make them sloppy or organized, freeform or in a grid — this is your project notebook. Curio's emphasis on visual thinking perfectly mirrors your real-world notebooks and whiteboards so you are instantly comfortable in Curio's intuitive environment.

Thousands of customers around the world, in a surprisingly diverse range of occupations, use and rely on Curio for information gathering, brainstorming, and creative exploration.
