

Dragging

Drag items from Curio to other apps

Dragging Out of Curio

There are several ways to drag items out of Curio to another application.

Drag an Asset Figure out of Curio's Idea Space

1. Begin by selecting a single asset figure on the idea space.
2. Hold `⌘⇧` (Option-Shift-Command) and click and begin dragging the already-selected figure. Notice that instead of dragging the figure itself around the idea space you are now dragging a file representation of that figure.
3. This is the important part: **release those keys** now that you've started dragging. You can continue dragging and drop it anywhere on your Desktop, a Finder window, or any other application.
4. The sole purpose of that magic 3-key combination is to tell Curio to place the asset figure's file URL on the dragging clipboard, instead of tracking a normal figure movement. It's important to release those keys after you've started the drag operation but while you're still dragging, otherwise the destination application will try to interpret those keys as a forced move, alias, or copy of the file but Curio only supports a copy of the file out of the project.

Drag Assets out of Curio's Project Library

- Select one or more assets from the Library and drag them directly to another application.
