

# Quick Tips

*Some helpful tips to use within Curio*

---

## **Quick Zoom**

Press and hold the q key to quickly zoom out and see the entire idea space.

Hover your mouse pointer over a particular area and when you release the q key your view will be restored centered in that area.

## **Right Click**

Curio uses context menus throughout the interface so be sure to right-click on figures, idea spaces, items in the shelf, the various galleries, and much more to see what quick options you have available to you.

## **Find**

Press Command-F to bring up the search shelf if you need to find a figure on an idea space. Press it again to cancel the search and close the search shelf.

## **Escape**

The Escape key is used for many things within Curio. Tap it to end text figure editing, to dismiss an inspector popover, to select a collection figure if an item within is selected.

## **Previous / Next vs Backward / Forward**

The top right corner of the inspector bar, just under the toolbar, shows a small navigation bar. The arrows can be used to go to the previous or next idea space in the Organizer.

If you press and hold the Option key those arrows allow you to go backward or forward in history which is helpful when bouncing around a project.
