

Text Figure Attachments

Adding attachments to text figures

Text Figure Attachments

Curio allows you to attach a file to a text figure.

If the file attachment is an image file type, then the resulting attachment will be displayed as a preview image, otherwise for other file types a thumbnail icon will be displayed for the attachment image. The size of the image or icon is controlled using the Icon Size slider in the Shape inspector popover's Options tab.

As with preview captions, the attachment is an actual component of the text figure, not a trick using a grouped figure. This feature is particularly useful in mind maps where an attachment can be associated with an existing node in the mind map instead of added as a separate child node.

Attach an External File Located on Your Hard Disk to a Text Figure

- Right-click on a text figure and choose **Attach File** then choose a file from anywhere on your hard disk in the dialog that appears. This file can be copied or moved into the project as an embedded asset or referenced as an alias.

Attach an Image from Outside of Curio to a Text Figure

1. Copy an image from outside of Curio, perhaps from Safari for example.
2. Right-click on a text figure and choose **Paste As > Attachment For Selected Text Figure**. The image will be added as a new asset to your project and will be displayed as an attachment for the text figure.

Attach a Existing Asset to a Text Figure

1. Select an existing asset figure on an idea space or an asset in the Library and copy it to the clipboard.
2. Right-click on a text figure and choose **Paste As > Attachment For Selected Text Figure**. Here the attachment will simply reference the same underlying asset.
