

Web Views and Google Docs

Bring some live content to your notebooks

Via the Insert toolbar button you can insert a web view figure to your idea space which can be used to load any website. You can also insert a Google Doc web view specifically if you wish.

Double-clicking a web view activates it and begins the web browsing session within the web view figure. The inspector bar changes to show you typical browser controls.

Click the Stop Browsing button in the inspector bar to end the browsing session. The web view will be replaced with a static image of the web site, slightly dimmed to indicate it is inactive.

Mac App Store Restriction

Please note that Curio products sold at the Mac App Store do not permit the creation of an unrestricted web view on the idea space. However, Google Docs, YouTube, and Vimeo web views are permitted.
